

# Immediate Job Opening

## “Seasonal Vector Ecologist”

Mercer County Mosquito Control  
Mercer County, New Jersey

### Responsibilities:

-Under direction of MCMC Entomologists, you will carry out daily mosquito surveillance and control activities.

-Show an ability and willingness to understand information about insects, mosquitoes in particular, including basic physical characteristics in various stages of development, habits, living or mating patterns, and their larval developmental areas.

-Perform field inspections to locate and identify Asian Tiger Mosquito (*Aedes albopictus*) larval and adult habitats and will assist in mosquito identification after a training period.

-Collects and preserves larval and adult samples from the field for later identification by supervisors

-Tracks daily activities and enters data using handheld GPS equipment. Learns proper data entry and management techniques after a training period using software provided by MCMC.

-Answer complaints and inquiries from the public by giving out basic information on mosquito life cycles and control.

-Helps in designing, preparing for and carrying out field trials related to mosquito fitness and response to pesticide.

-Assists with data entry and analysis

### Requirements:

-A firm science background, preferably a student working towards a degree in biology or a related science.
